

ROLLER BLIND HARDWARE SOLUTIONS PRECISION IN MOTION

TRIED, TRUE & TRUSTED

EVERY PRODUCT IN ACMEDA'S EXTENSIVE RANGE DELIVERS AN INNOVATIVE HARDWARE SOLUTION THAT BRINGS PRECISION IN MOTION TO THE WINDOW FURNISHING INDUSTRY, EVERY TIME. SUPERIOR SYSTEMS THAT HAVE EVOLVED WITH TIME, AND TECHNOLOGIES THAT HAVE BEEN ENHANCED WITH EXTENSIVE RESEARCH AND DEVELOPMENT, KEEP ACMEDA AT THE CUTTING EDGE OF WINDOW FURNISHING TRENDS.

Since the 1990s, our family owned business has been trusted by many of the world's leading window furnishing businesses to make great looking designs that perform to perfection. Now a global force in the industry, Acmeda's superior performing product range, backed by patented technology, is coupled with a family-business attitude to provide our customers with prompt and reliable service.

UNIQUE, HIGH PERFORMING & VERSATILE RANGE

There is an **aesthetically well-designed** Acmeda hardware solution available to complement every beautifully designed roller blind, with extensive **functionality**, and interchangeable **versatile** components.

Our broad range of hardware solutions is made up of small compact systems, our popular medium through to large systems, and extreme solutions for heavier duty commercial applications. Our range also includes various control mechanisms, size options, and extras to make every solution complete.

Among our **unique patented technologies** are the Easy-Lock™ and Easy-Link™ systems. Easy-Lock™ is the preferred system of roller blind installers. In just one easy step, the blind locates and locks into the idle bracket.

The revolutionary Easy-Link™ bracket system allows multiple blinds to be connected and controlled by a single mechanism, or independently to reduce light gaps between shades.

SMALL

The S35 small roller blind system is a perfect solution for smaller applications. Sized to give the blind a more proportioned overall finish, it features the Easy-Lock™ effortless installation system, optional spring assist booster technology, and comes in a neat square edge profile bracket design for minimal light gaps.

The snap on slim bracket covers provide a clean, smooth, neat finish and the universal retro-fit booster can be used on either left or right hand chain controls achieving blind sizes up to six square metres.

Like many Acmeda systems, the S35 has standard and heavy duty tube options that come with low profile T-spline or convenient double sided tape attached.

Our small systems are available in three control mechanisms - spring, chain or motorised, through low voltage or battery motors.

The S35 can be used in conjunction with Round Box 70, Square Box 85 and FRS80 valance add on systems to ensure you achieve the right finished look.

MEDIUM

The popular and reliable S40 and S45 medium systems meet the needs of most window furnishing requirements. Featuring Acmeda's Easy-Lock™ effortless installation system and offering four control solutions - crank gear, motorised, chain and spring hand operated controls - the series includes unsurpassed features for optimal performing solutions.

The established RB08 chain control is a popular reliable solution, while our latest patented RB09 solution boasts an improved high polish finish, 10mm idle extension and snap lock screwless assembly. The innovative RB09 has become an industry benchmark for premium hardware solutions.

Automate is the latest motorisation system, offering a cost effective solution for the ever growing motorised shades. Features include single or five channel remotes with a frequency range up to 200metres and secure locking bracket designs. Acmeda's unique range of automate motors are available in wire and wirefree options to suit S45 medium roller blinds. Accessories are also available to suit the vast range of motors on the market including Somfy, Becker, Nice, Gaposa, Selve and Dooya.

Our medium range comes with the also patented smooth, quiet and durable Easy-Link™ system to allow multiple blinds to be controlled independently or by a single unit, ensuring a minimal join to enhance the width of straight linked or angular blind.

A variety of combo brackets are available with Easy-Link™ compatibility. These are designed to suit the growing demand for dual blinds, providing sheer and block out shades on one convenient bracket design, offering same side or opposite sided controls in new compact designs.

To assist lifting heavier blinds, attach an Easy-Lift spring booster to reduce user effort. Boosters are available in standard or heavy duty versions.

The latest innovation to the medium range is our new Childsafe system, featuring a patent protected chain control and tensioner all in one – eliminating the requirement to fix a tensioner to a wall and ensuring a child safe environment. Child safety tensioners are also available to suit recess or face fix applications.

Add on systems including Round Box 90, Square Box 100 and FRS100 valance will enhance the aesthetics of this solution.

LARGE

The S60 Large roller blind system meets the demand of heavier shading applications. This robust design is available in chain, motorised or crank gear control options.

With its high performance spring boosters, available in three strengths along with 60mm and 80mm aluminium tube sizes, the S60 chain control system can lift shades of up to 25kgs while maintaining a strong pull force of less than 3kgs.

Installation of the S60 is easy with Acmeda's secure snap lock spring loaded idle end technology, whilst adjustable and non-adjustable brackets are available with covers and screw plates to provide a neat finish.

Acmeda's heavy duty linking systems, Multi-Link and Uni-Joint, can be added to ensure wider spans and curved window applications on the one slimline bracket design. These systems also feature adjustable height allowances ensuring you achieve a perfect level finish.

The S60 range also features combo brackets to suit the growing demand for dual blinds, providing sheer and block out shades on one convenient bracket design. Adding Acmeda's Square Box 120 and FRS120 valance systems can achieve a premium finish to your large roller blind solution.

EXTREME

The S100 Extreme roller blind system is designed for internal and external large commercial applications requiring a secure, robust solution. The S100 allows for motorised controlled systems in excess of 7 meters wide. Choose from three robust heavy duty tube options - 100mm, 130mm and 160mm - extruded in high grade extreme aluminum alloy. The extreme duty hardware is built to endure outdoor weather conditions, and extreme shade weights, while maintaining a well designed finish that matches the aesthetics of the blind's exterior.

WIRE GUIDE

The Acmeda wire guided system can be used on internal and external applications to prevent blinds from unwanted movement in high level wind conditions.

The Internal wire guide solution is easily adapted on S30/S40 & S45 systems to ensure a secure guide for the Easy-Lock™ roller blind range.

The stainless steel external wire guided system is available for S60 & S100 in swaged or swageless options ensuring easy tensioning adjustments post installation while providing bottom, top and face fixing solutions to suit all outdoor applications.

Compatible with our cassette and pelmet ranges to provide a neat clean overall finish.

FRS VALANCE / PELMET COVERS

This decorative fascia for roller blinds is available in three popular sizes - 80mm, 100mm and 120mm - to ensure compatibility with the smallest to the largest application. All fascias offer a unique fabric attachment option to match any existing décor. Compatible with our S35, S40, S45 and S60 roller blind systems.

CF CASSETTE / FASCIA SUITE

Our CF suite offers a comprehensive collection of head box styles, controls and side channel options with improved performance, functionality and aesthetics. The contemporary round or square headbox profiles; available as fascia or fully enclosed cassettes, are designed to house our small (compact) roller systems, as well as our most commonly used medium chain, motorised or spring controlled systems. This modular system features adaptable dim-OUT side channels for improved energy efficiency and light blackout.

WE DELIVER

With innovative know-how behind every design, Acmeda's dedicated team of R&D specialists, engineers and customer service staff deliver world-class hardware solutions to a global window furnishing market.

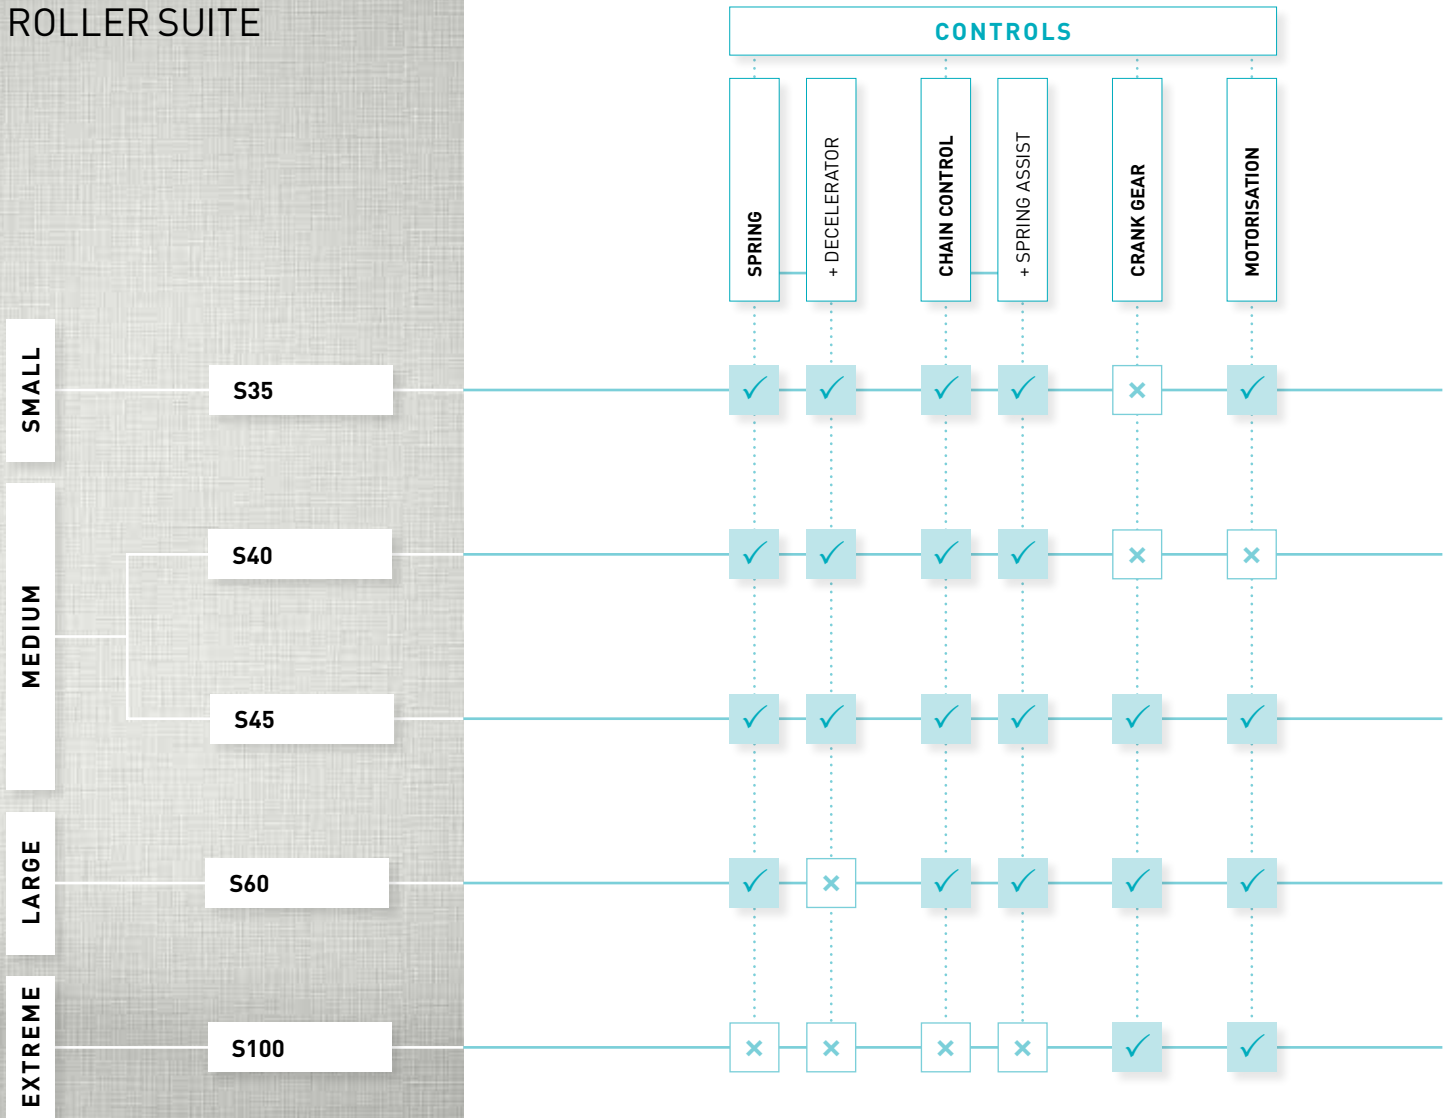

Built to last a lifetime, every product in our extensive range meets industry needs and has been tried and tested for unsurpassed performance and reliability.

Our global presence means that no matter where your business is located, Acmeda will respond to your needs quickly.

That's our precision in motion promise.
